

[SYSTEM AND METHOD FOR BUSINESS SYSTEMS TRANSACTIONS AND INFRASTRUCTURE MANAGEMENT]

Abstract of Disclosure

The system and method for business systems transactions and infrastructure management includes a client side collection system and a server side system having the capability to communicate with the other over a secure communication path. The collection system extracts transaction and infrastructure data from a business system and transmits the extracted data to the management server over a secure communication path. The management server receives the extracted data over the secure communication path, compares it to threshold analyzes the data that exceed threshold values, and notifies a user of the results of the analysis. The management server also has the capability to activate corrective scripts in the client business system and to reconfigure the client business system.
